Claims 1-6 are pending in this application which is a continuation of application SN 10/257,874, now abandoned, which was filed under 35 USC 371 as the national stage application of PCT/EP01/04889, filed April 30, 2001.

In the papers filed April 5, 2004, for transmittal of a new application, applicants requested that the IDS and references filed in the parent application be incorporated into this application. In order to accomplish this, applicant is requested to provide a new IDS which will be initialed and returned with the next office action.

Applicants' claims are identical to those originally filed in the parent application, and are drawn to methods of inducing plant resistance to viruses by treatment with compounds comprising a phenyl ring core (formula I) with 1,2-substituents identified as "-Q" and "-A", in which the first mentioned Q group is -C(=CHMe)-COOMe, and the first mentioned A group is phenoxy (-O-B, with B=phenyl). Extensive alternate and additional substitutions are possible.

In the response filed August 15, 2003, in the parent application, applicants elected the species comprising the method of using compound I-5 on page 6, i.e., pyraclostrobin. This election is maintained herein.

Claim 4 has been held withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 6.

Claims 1-3, 5 and 6 have been examined only insofar as they read on the elected species.

Again, upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 1616

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 6 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter, i.e., the use of a material. This claim has not been further treated on the merits.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 5 are rejected under 35 U.S.C. 102(a) and (b) as being anticipated by Müller et al (WO 96/01256, cited in the specification, see p. 6).

Müller et al teach that pyraclostrobin was known, as was the method of applying it to plants for its fungicidal effect (p. 48). It would necessarily follow that application to plants as a fungicide would also induce viral resistance.

No claim is allowed.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out

Art Unit: 1616

the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103c and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Mark Clardy whose telephone number is 571-272-0611. The examiner can normally be reached on 7:30-5:00.
